

The E-Beef Online Series involves four sessions over four weeks in June (2020), providing landholders, extension staff and industry stakeholders with key insights on new and emerging technologies relevant to the grazing industry.

SESSION
THREE**TECHNOLOGY SHOWCASE (PART 1)**

12:30PM – 1:30PM Wednesday 17th June 2020

This is the third webinar in a four-part E-Beef Series that focuses on improving productivity and profitability in grazing. This is the first of two sessions which will showcase new and emerging technologies in the grazing industry that are being trialled as part of the E-Beef Project.

During this session, you will hear from some true innovators in the beef industry:

Farmbot Remote Water Monitoring Solutions - Whole Farm Ecosystem

Rachael Dunn

Business Development Manager - Farmbot

The Farmbot software solution will provide insights about your water assets in any operating environment. This means you can have peace of mind around what your water is doing 24/7. We can ensure that when and where action is needed you will know, allowing you to be more productive and profitable across your operations.

Solving the need for an easy way to get in-paddock stock weights

Bill Mitchell

Founder - Optiweigh

Optiweigh is a patented system for capturing livestock weights in the paddock. It is fully portable and comes complete with a communications solution that sends weight data back to the office in real time – using either cellular or satellite connectivity.

Accurate, Affordable Farm Connectivity, Anywhere

David Ward

Sales Manager - Goanna Ag

What if your farm could talk to you and you could understand exactly what it was saying? With Goanna Ag, you can connect to your farm like never before. Using low cost sensors and connectivity, we work with Farmers to optimise soil, water and weather management across the farm and significantly improve on-farm efficiencies.
