

# Breedcow and Dynama software for extensive beef practices

What is the most profitable age of turnoff?

What is the best selling strategy when forced sales are required?

What is the most profitable balance between heifer culling rate and mature cow sales?

These are just some of the questions that can be answered with the Breedcow and Dynama software package.

Breedcow and Dynama is designed to plan, evaluate and improve the profitability and financial management of extensive beef cattle enterprises.

Specifically, it can help you evaluate the economic impact of a change in grazing practices.

Breedcow and Dynama is based on four budgeting processes:

1. comparing the likely profitability of the herd under different management or turnoff systems (Breedcowplus program)
2. making forward projections of stock numbers, sales, cash flow, net income, debt and net worth (Dynamaplus program)
3. deciding what to sell when the plan goes sour or what to buy when there is an opportunity (Bullocks and Cowtrade programs)
4. evaluating long-term investments in herd or property improvement to determine the rate of return on extra capital (Investan program).

To download the programs, go to [daf.qld.gov.au](http://daf.qld.gov.au) and search for 'breedcow' or Google 'breedcow'.
