

# SMALLER LANDHOLDER FIELD DAY

## Red Bluff Charters Towers

FRIDAY JUNE 28, 2019 - 9 am - 4 pm

Queensland  
Government

### WHAT IS REGENERATIVE AGRICULTURE

Regenerative agriculture is the production of a product from the land while improving the health of the resource.

Building soil carbon  
soil biological activity  
Improving soil structure, water holding  
capacity and water use efficiency  
Improving nutrient cycling  
Increasing pasture productivity

*"basically  
everything from  
the ground up"*

Perennial grasses & importance for land health  
Grazing management to improve plant growth  
and soil health  
Measuring feed/forage and plan to match  
stocking rate to carrying capacity  
Methods to monitor pasture and soil health

## JUDI EARL

*Pasture Ecologist*

Pasture ecology is about the natural processes that occur with pastures and grasslands, really working with and understanding the natural cycle and the plants that are present to improve out-comes naturally from the existing base.
