

Preventative Measures for Flood Recovery

A DAY WITH OUR FIELD EXPERTS

BMRG is inviting you to come along to “Tressavale”, located in Glastonbury, Gympie, on Thursday 8th August 2024, to hear from leading experts in the regenerative agricultural sector to highlight how natural sequence farming methods and rotational grazing principals can help manage flood impact.

KEYNOTE SPEAKERS

Stuart Andrews - Forage Farms and Tarwyn Park Training in the Mary Valley

- For over 40 years Stuart and his family has been dedicated to understanding, practising and teaching methods of landscape restoration. Natural Sequence Farming is used as a system of farming focused on implementing natural landscape functions back into degraded landscapes.

Andrew Zerner - Cattle Producer, RCS Consultant

- RCS Australia are one of Australia’s most successful foundational programs in effective grazing land management. Andrew is our region’s RCS facilitator and a grazier located in Murgon. Andrew has been assisting local producers with his expertise in regenerative grazing principles, in particular rest and rotation, which leads to better water infiltration, water holding capacity and ground cover improving production and profitability.

Our keynote speakers will run through presentations in the morning, followed by paddock demonstrations in the afternoon, on-farm. Enjoy morning tea & lunch on us, and the chance to catch up with fellow producers.

‘TRESSAVALLE’ at GLASTONBURY, GYMPIE
