

# Pasture dieback trials field day

9th April 2026

## Guest speakers

Gordon Rogers

Managing Director  
Applied Horticultural Research

Naomi Diplock

Lead Researcher for the  
pasture dieback trials  
Applied Horticultural Research

Caroline Hauxwell

Associate Professor  
Queensland University of  
Technology

## Event information

Join us at a trial site to view & discuss results from the pasture dieback trials.

2:00pm - 5:00pm

Kulcaway  
2291 Theodore Road  
Theodore, QLD 4719

*Complimentary beverages provided.  
Please bring a chair and a hat.*

Pasture dieback continues to cause major feed losses across Australia, creating a need for practical management strategies to help producers maintain feed supply and reduce production impacts. While longer-term solutions are still being pursued, field trials established five years ago have provided insights into approaches that may improve pasture performance and resilience in dieback-affected areas. Sharing these results helps to support informed management decisions.

## Topics will include:

- Management of pasture dieback – best bets
- Walkthrough of trials - results five years after establishment
- Producer experiences with dieback
- Role and biology of mealybug in dieback
- How to identify and monitor for mealybug
