

Stocktake Plus

YOUR NEW BEST MATE IN THE Paddock

Everything you need to monitor in the paddock is available on the one device—no need to carry around your pasture photo standards, GPS and camera to complete your assessment!

Stocktake Plus is the first decision support app from FutureBeef and Meat & Livestock Australia, built with industry experience. Specifications for the app were developed in consultation with the northern beef industry and stakeholders.

Based on the popular Stocktake workshop program, the app contains a number of additional features and inbuilt support tools.

About the app

Stocktake Plus is visual, logical and easy to use, and works in remote areas without 3G or 4G reception.

It monitors grazing land condition, stores monitoring information and produces reports, including long-term carrying capacity calculations.

It also calculates short-term stocking rates to balance pasture supply with stock demand and guides you through a basic or detailed forage budget.

Stocktake Plus:

- stores rainfall records
- stores stock numbers (converts to adult equivalents, displays current stock on land condition reports and can import figures to demand section of a forage budget)
- records GPS coordinates of monitoring sites
- backs up all information securely on the internet.

The app has many in-built support tools including:

- land type description fact sheets
- pasture and ground cover photo standards
- accessible yield calculation sheets
- dendrometer for measuring tree densities.
