## Stocktake Plus how to: Calculate sapling tree basal area

### To calculate sapling tree basal area

1. If saplings dominate an area, this technique will provide a better TBA than other methods.
2. If saplings are very dense count the number of saplings in a 10m strip 1m wide, and estimate their average diameter at approximately 30 cm from the ground.
3. Input these numbers into the Stocktake Plus app sapling TBA calculator to convert to TBA  $m^2/ha$ .
4. If sampling density is not very high, then you may need to sample a bigger area (e.g. 10m x 10m square).
5. This function in the 'calculate' section is a calculator only and does not save the information.
